# DB-25 male, right-angle: footprint check sheet (KiCad 9.0 stock footprints)

- Print this PDF at **100% / Actual size**. Turn off "fit to page" and "scale".
- First check the bar below measures exactly 50 mm with a ruler. If it does not, the print scale is wrong and nothing else on these pages can be trusted.
- Each following page is ONE stock footprint at true size: pin holes, rows, side mounting holes, outline. Lay your real connector on it, pins down into the holes, and look through the paper (hold it against the light).
- Tell Claude which page matches (all holes line up, shell sits right), or that none does.
- Nothing here has been checked against a physical part. That is the point of this sheet.
